OPENNEBULA 2.2 Key FEATURES AND BENEFITS MARCH 2011 - REV20110511

A. Key Features and Benefits for Cloud Management

	Capabilities for Cloud Computing	KVM	XEN	VMware
	Private Cloud Co	omputing		
User	r Management			
	Authentication framework based on			
1	passwords, ssh rsa keypairs or LDAP	х	х	X
-	Multiple user and cloud administrator roles	х	х	X
- :	Secure multi-tenancy	х	х	X
- (Quota management for controlling resource			
(consumption	Х	х	Х
-	Functionality for user management: create,	х	×	×
(delete and list	*	*	×
	Accounting to visualize and report resource			
	usage data, to allow their integration with			
	chargeback and billing platforms, or to	х	х	х
	guarantee fair share of resources among			
	users			
	mage Management			
	Image repository with catalog and powerful	х	х	x
	image management			
	Creation of VM instances from images in the			
	catalog without worrying about low-level	х	х	x
	disk configuration attributes or block device			
	mapping			
	Access control to the images registered in			
	the repository, hence simplifying multi-user	х	х	x
	environments and image sharing.			
	Creation of new images by saving running	х	х	х
	virtual machines Functionality for VM image management: list,			
	publish, unpublish, show, enable, disable,	х	x	x
	register, update, mattr, saveas and delete	^	^	^
	ual Network Management			
	Create ranged or fixed networks	х	x	x
	Network isolation at layer 2	×	×	×
	Definition of generic attributes associated to	^	~	^
	a Virtual Network (e.g. gateway, dns			
	servers) that can then be included in the	х	х	х
	context of a VM			
	Virtual Networks can be defined as public,			
	and thus shared among multiple users	х	х	х
	Functionality for virtual network			
	management to interconnect your virtual	х	х	x
	machines: create, delete, monitor and list			
	Instance Management			
	The same physical box can be accessed			
	through different hypervisors	х	х	x
	Centralized management of environments			1
	with multiple hypervisors	х	х	x
	Support for automatic configuration of			
	virtual machines	х	х	×
	Administration scripts can be triggered upon			
	VM state change	х	х	х

				
-	Functionality for virtual machine	х	х	
	management: submit, deploy, migrate,	(livemigrate	(livemigrate	х
	livemigrate, stop, save, resume, cancel,	only with	only with	(livemigrate
	shutdown, restart, delete, monitor and list		shared	not
		shared		supported)
		storage)	storage)	
Ор	eration Interfaces			
-	Unix-like command line interface to manage			
	users, VM images, VM instances, virtual			
	networks, clusters, physical hosts, accounting	Х	Х	Х
	and authentication and authorization			
-	Sunstone graphical interface: OpenNebula			
	cloud operations center	х	х	Х
Ser	vice Management			
_	Deploy multi-tier services consisting of			
	groups of inter-connected VMs, and their	х	х	х
	auto-configuration at boot time			
-	Contextualize each virtual machine to feed			
	information related to the service it belongs			
	to (IP of the front-end, public ssh keys,	Х	Х	Х
	software licenses, certificates,)			
-	Support for Microsoft Windows and Linux			
	machine images	Х	х	х
Set	neduling			
-	Powerful and flexible Requirement/Rank			
-	matchmaker scheduler	х	х	х
-	Define workload and resource-aware			
-				
	allocation policies such as packing, striping,	х	Х	х
16	load-aware, affinity-aware			
Inti	rastructure Management			
-	System features a small footprint, its	х	х	х
	installation fits in less than 700Kb.	~	~	~
-	Multiple cluster support: Physical boxes can			
	be partitioned into logical clusters to serve	х	х	х
	different types of service workloads			
-	Management of physical hosts: create, delete,			
	enable, disable, monitor and list	х	Х	х
Sto	prage Management			
510	Multiple hardware support: FibreChannel,			
-	iSCSI, NAS shared storage, local	V	v	X
	SCSI/SAS/SATA storage	Х	Х	х
-	Multiple storage backend: Virtual Machine			
	images can be stored and transferred using			<u>, , , , , , , , , , , , , , , , , , , </u>
	SSH on a non shared file system, or using a	х	х	х
	variety of shared file systems (NFS, LVM with			
1.5	CoW, VMFS, etc)			
	ormation Management			
-	Functionality for monitoring of virtual and	х	х	х
L	physical infrastructures	-	-	
-	Integration with datacenter monitoring tools,	х	х	
	such as Ganglia			

	Hybrid Cloud Computing			
Cl	oudbursting			
-	Outsource virtual machine to a public cloud using pre-uploaded images configured with your particular service	х	×	х
-	Support for Amazon EC2	Х	X	х
-	Simultaneous access to multiple clouds	х	X	х
Fe	Federation			
-	Federate different cloud instances to build a hierarchy of independent virtualization clusters, enabling higher levels of scalability	х	x	х

	Public Cloud Computing			
Clo	oud Interfaces			
-	Turn your local infrastructure into a public cloud by offering REST interfaces to your users	x	x	x
-	Implementation of OGF OCCI, the emerging cloud API standard	×	х	х
-	Implementation of Amazon EC2, the de facto cloud API standard, and compatibility with EC2 ecosystem tools	x	x	х
-	Support for simultaneously exposing multiple cloud APIs	x	x	х
-	Client tools available to access your public cloud	×	x	x
-	Secure your public cloud by exposing an https interface	х	х	x

B. Key Features and Benefits for Integration

Cap	pabilities for Integration
	astructure Abstraction
-	An abstraction layer independent from underlying services for virtualization, networking
	and storage
-	Modular approach to fit into any existing datacenter, and to enable its integration with
	any product and service in the data center
Ada	aptability and Customization
-	Enable the deployment of any cloud architecture: private, public, hybrid and federated
-	Customizable plug-ins to access any virtualization system
-	Customizable plug-ins to access any storage system
-	Customizable plug-ins to access any information system
-	Customizable plug-ins to access any system for authentication and authorization
-	Customizable plug-ins to access any remote cloud services for hybrid cloud computing
-	New plug-ins can be easily written in any language
-	Configuration and tuning parameters to adjust behavior of the cloud management
	instance to the requirements of the environment and use cases
-	Hook mechanism to trigger administration scripts upon VM state change
Inte	eroperability and Standards
-	Open standard-based architecture to avoid vendor lock-in and to enable interoperability
-	Implementation of standards
Op	enness
-	Open-source technology distributed under Apache license that is matured through a
	vibrant community.
-	Open internal and external interfaces
Pro	gramming Interfaces
-	Native cloud API in Ruby and JAVA to create new cloud interfaces
-	XMLRPC API to access the core functionality

C. Key Features and Benefits for Production

Ca	pabilities for Production
	curity
-	Authentication framework based on passwords, ssh rsa keypairs and LDAP
-	External and internal communications through SSL
-	Secure multi-tenancy
-	Isolated networks
Fa	ult Tolerance
-	Persistent database backend to store hosts, networks and virtual machines information
-	Configurable behavior in the event of host, VM, or OpenNebula instance failure
Sc	alability
-	Tested on large scale infrastructures consisting of thousands of cores and VMs
-	Highly scalable database back-end
-	Support for MySQL and SQLite
-	Virtualization plug-ins adjusted for maximum scalability
-	Support for multiple isolated clusters to serve different types of service workloads
Pe	rformance
-	Very efficient core developed in C++ language
Re	liability
-	Automated testing process for functionality, scalability, performance, robustness and stability

D. Leverage the Vibrant Cloud Ecosystems

Vi	Vibrant Ecosystems		
Op	penNebula Ecosystem		
-	Leverage the OpenNebula ecosystem with new components enhancing the functionality provided by the OpenNebula Cloud Toolkit or enabling its integration with existing products, services and management tools in the virtualization, cloud and data center ecosystems		
-	vCloud API, OpenNebula Express, Haizea Scheduler, Libcloud, Deltacloud, Web Management Console, Deltacloud adaptor for hybrid clouds		
Ec	Ecosystems around Amazon AWS, OGC OCCI and VMware vCloud		
-	Leverage the ecosystem being built around most common interfaces
